

HDPE CHAMBERS, CATCHPITS & MANHOLES

Overview

Concrete Valve chambers, catch pits, flow control terminals, access manholes etc require staged construction, utilising specific equipment and various trade skills, In addition works have to be sequentially programed over a number of days and invariably involve complex and unnecessary H&S issues sometime including confined space consideration.

HDPE chambers are prefabricated to clients specific requirement, fully seamed welded and tested, simple connection via mechanical or electro-fusion jointing onto pipe lines will give a completely sealed and integrated system.

Leakage through burst ,brittle and unyielding pipes cause billions of litres of water lost EVERY DAY in the UK. HDPE pipes fused to HDPE chambers significantly reduce wastage and cost.
